

Floor Plan Design

The goal for the floor plan design was to make a luscious garden that filled the learning commons space. At the same time, I wanted the garden to accommodate separate spaces for different users to use the installation. The hexagon became the most suitable form that was able to interlock well into a visually pleasing bundle.

I thought it would be great to have many people use the garden pods. I first designed it so that users can simply stand in a one hexagon pod and just turn around while standing to interact with plants. Angela gave me advice on making equal accessibility for all handicapped users to prevent any user discrimination. This dictated the final solution of the floor plan which accommodates 7 students at a time.
